INSTRUCTIONS FOR ORDERING

Five bulbs will be sold for one-half the price of 10, but no single item for less than 20¢. On orders under \$2.00 please include 25¢ to help cover postage.

All bulbs priced by the bulb or by the 10 are postpaid. Bulbs priced by the 100 in the Quantity List are priced f.o.b. here, - customer pays the transportation charges upon delivery. Or, if you include parcel-post charges with your order, be sure to include enough. Any excess will be refunded you, either in cash or in extra bulbs.

Washington customers must include 3 1/3% State Sales Tax.

BULB SIZES - In the Retail List, bulbs are listed as L, M and S. Large bulbs (L) are sizes No. 1 and No. 2; medium bulbs (M) are sizes 3 and 4; and small bulbs (S) are sizes 5 and 6. For exhibition spikes use the large bulbs, but for average garden growing the medium bulbs will make very satisfactory bloom. The small sizes are principally used for growing large bulbs for the following year, but will usually make small spikes.

All bulbs are hand-cleaned, and are carefully selected when packed. They will fully meet the standard of GOOD (best) QUALITY of the Federal Trade Commission. If, for any reason, bulbs are unsatisfactory upon receipt, please notify us at once. We will replace any bulbs proving untrue to name at blooming time, but we cannot guarantee satisfactory growth of bulbs or bulblets, as your growing conditions are beyond our control.

MOLES and WIRE-WORMS

These two pests are quite prevalent in many western Washington gardens. We recommend treating the soil with either Aldrin or Heptachlor. Either of these materials can be obtained as a dust from your seed store.

The wire-worm eats into the stalk of the young plant below the surface of the soil, causing the top to die. The worm will also bite the bulbs, causing small scabs to appear on the bulbs and probably spread disease from bulb to bulb.

We have noted in our own fields that moles will not come into soil that has been treated with either of the above materials, yet hundreds of moles were in adjoining pastures. These dusts should work equally well for your lawn or flower garden, but we do not recommend for your vegetable garden, as it may cause an unpleasant flavor in root crops.
